

Anton Mazhuto

Senior FullStack Developer

✉ mazhutoa@gmail.com 📍 Moscow, Russia

🌐 [linkedin.com/in/anton-mazhuto](https://www.linkedin.com/in/anton-mazhuto)

Summary

Senior FullStack Developer with 7+ years of experience in building enterprise web applications, decentralized platforms, and AI- integrated systems. Proven track record of delivering highload, scalable, and secure products in FinTech, Healthcare, and Web3 domains.

Strong expertise in Next.js, React, TypeScript, Solidity, NestJS, PostgreSQL, AWS, and Kubernetes, with hands-on experience in NFT marketplaces, decentralized data storage, AI agents, and blockchain wallet integrations. Key focus areas: - Web3 development (Solidity, EVM, Polygon) - AI integrations (MCP, LangChain, AI agents) - Highload backend systems (Kafka, Redis, ElasticSearch) - Cloud & DevOps (AWS, Docker, Kubernetes, CI/CD) - Secure code analysis & DevSecOps (Semgrep, sandboxing)

Experience

Full-Stack Engineer, Cere Network

02/2023 – Present

High-load tracking & AI data platform

San Francisco, United States

- Built a high-load system to securely track actions of users and drones and store data in decentralized storage, explicitly designed as a reliable data source for downstream AI agents and analytics.
- Implemented backend services on NestJS with Kafka, Redis, ElasticSearch and AWS to provide robust event ingestion, querying and monitoring for AI-driven prediction and analysis.
- Participated in designing agents that consume these data streams to provide near-real-time insights and alerts for operations.

NFT Marketplace (Polygon)

- Developed backend for an NFT marketplace on Polygon for content creators (artists, streamers, musicians): buy/sell flows, auctions and orders.
- Implemented NestJS services and smart contract integrations using Web3.js, Ethers.js and Solidity, ensuring secure wallet interactions and transaction handling.

Decentralized Data Cloud & Video Platform

- Contributed to a Decentralized Data Cloud as infrastructure for dApps and a video platform for hosting and selling content via NFT orders and auctions.
- Built backend logic around content management, access control and purchases with NestJS and AWS.

Community Analytics AI Orchestrator (Telegram, embeddings, RedisGraph, LLM)

Designed an event-driven pipeline that ingests Telegram messages, filters noise, generates embeddings and clusters conversations, using LLM agents with JSON-Schema structured outputs to build topic trees in RedisGraph for analytics queries.

In-Game Voice Analytics Agents (gaming company prototype)

Built a multi-agent system that combines speech-to-text, LLM agents and aggregation logic to analyze players' voice chats for pain points and themes in near real time, balancing quality and latency.

Frontend Engineer, EsqUp

09/2021 – 02/2023

Contributing to SaaS platform product development for the financial industry and helping to provide industry-leading solutions.

New York, United States
of America

Frontend Developer, Medical Note

05/2020 – 09/2021

Contributed to Medical service platform product development and helped to provide industry-leading solutions.

Moscow, Russia

Designed User Interfaces (including User accounts) and services, improving User Experience by implementing user feedback

Conducted technical interviews with potential team members

Managing a team of two front-end developers.

Middle Frontend Developer, Sirena Bus

09/2019 – 05/2020

Development of a cargo transportation CRM service from inception in a geographically distributed team

Moscow, Russia

Frontend Engineer, LLC "Castor-Systems"

02/2019 – 09/2019

Development of a high-loaded construction service in a geographically distributed team without a Team Leader.

Moscow, Russia

Helped the team to build application with server side rendering.

Frontend Engineer, TUI

07/2018 – 02/2019

Worked in Agile workflow

Moscow, Russia

New component and frontend architecture design and implementation

Layout design via Zeplin software

Legacy project refactoring

Frontend developer, Bakin Art Studio

07/2017 – 07/2018

Develop html layout and frontend logic.

Beloozersky (Moscow region)

Created new blocks and pages in the WordPress template

Education

Diploma of a specialist in engineering, Faculty of Physics and Technology,

2012 – 2018

National Research Nuclear University MEPhI

Top Skills

- | | |
|--------------|------------------|
| • TypeScript | • React, Next.js |
| • Node.js | • NestJS |
| • Solidity | • PostgreSQL |
| • AWS | • Kubernetes |
| • Docker | • Kafka |
| • Redis | • Web3.js |
| • Ethers.js | • LangChain |
| • MCP | • OpenAI APIs |
